

## The AEROFARM :

the smallest – and most economical - of all Aero-hydroponic systems

Did you want to try aero-hydroponics but never found a simple and economical way to do it? Well, now it's possible thanks to the AeroFarm, GHE's latest growing module.

7 good reasons to adopt it:

1. The AeroFarm (45 x 45 x 43 cm) fits perfectly in small growing areas.
2. Like the AquaFarm, it is made with heavy-duty recycled plastics, and includes a barrier against light and UV to prevent algae from growing in the reservoir.
3. It holds 1 to 5 plants and may be used for mothers as well as for complete crop cycles.
4. It has a large reservoir (up to 45 l) and easy access to the nutritive solution.
5. It is very easy to assemble, to clean and to maintain. It is user-friendly and comes with a set of detailed instructions.
6. An AeroFarm means NO MORE SUBSTRATE to move up and down, and to discard. Simply use the plastic net-pots or the coco pots with the coco covers, or, if you really wish, just fill the pots with a few clay pebbles.

7. LAST BUT NOT LEAST: if you already have an AquaFarm and wish to try aero-hydroponics now, keep your reservoir and simply buy the AeroFarm conversion kit. You'll be set in no time.

As with all of its products, GHE guarantees immediate and free technical advice and product follow up.
