

New from GHE  
An exceptional concept!

# CocoTek

## Organic substrate

*0% sodium !!!*  
*100 % organic!!!*

Coco fibre is far from being a new material! It already exists since many years and is sold in many forms. The quality depends on the attention given to its source, the manufacturing conditions, and, of course, its horticultural properties.

GHE supports sustainable development and ethical commercial practices. Before offering you our coco selection, we insisted on finding fibre whose origins are sure (no child labour, ethical farming), on defining the necessary qualities for rapid and healthy growth, and then brought them together in a single product which is high performance, natural and profitable for the people who grow it. We present "CocoTek", a quality concept!

Produced entirely from palm trees grown on the Mexican Altiplanos, our coco brand is of exceptional quality and meets all the conditions for optimal growth:

- Near 0% sodium content (unique in the industry)
- Perfect water to oxygen ratio
- Excellent aeration due to woven material\*
- 100% organic coconut fibre and latex
- Inert substrate, reusable for at least 3 harvests
- Bio degradable (3 years for total composting)

## THE POTS

For soil or hydroponics,

our pots are woven\* to provide

perfect aeration for the root area.

\* (not shredded, to avoid fibre packing)

Ø 15 cm

Like Grorox (clay balls), and in contrast with rockwool, CocoTek is a healthy, sustainable, biodegradable and ecologic substrate.
