The Tri System Special for retailers!

Serving the end customer of course,
but the retailer too !!!

General Hydroponics Europe is happy to present the "Tri-System", a special "Demo Unit" for retailers. A growing system which will tell you more, in one glance, than a sales person can describe in a long time, and allow you to exhibit, in less than 1m², the equivalent of at least 4 to 5 m².

Retailers know how difficult it may sometimes be to explain hydroponics as a technology, how it works, or the difference between "Aero" and "Hydro"... among a list of other things. And how problematic it is to display several systems at once, because of lack of space, not to speak about stocking costs ...

GHE is a "conceptor" of hydroponics and our range of growing units is extensive and adapted to most projects. If AquaFarms, or CuttingBoards and RainForests are reasonably sized units easily displayed in most windows, the AeroFlos and Dutch Pots are a different matter all together.

Our desire at GHE is to facilitate that process, and for a few months we set our task at finding a way to present the widest range of the technology while helping shops get the best of their display area - at the lowest cost, ... while pleasing the eye too, of course!

A mix between
DPS Hydro/Aero,
and AeroFlo: 0,75 x 1 m

So we designed a demo unit, the "Tri-System": a combination of Dutch Pot "Hydro", Dutch Pot "Aero" and AeroFlos.

The Tri-System is a small unit (0,75 x 1 m) that fits in most exhibition areas. It comes with 2 informative posters, with pictures and technical data on the different models and sizes available*. It is very economical (so much that we sell only one per shop), and can be converted into other growing units if one day you decided to change your setting.

Along with the Tripacks Flora-series and One Part, the Tri-System brings a new dimension to our industry. Those 2 products represent another motivation for shops to promote our technology better still, and for end customers to understand the efficiency and beauty of hydroponics at a glance, and adopt it with the least questions in mind.

Some of our clients who already saw the Tri-System are suggesting that end customers may want to buy it. If this became a generalization, we will be happy to turn it into a commercial unit. Let us know your comments. For more information please contact your usual dealer or General Hydroponics Europe at:
